Doctor Profile

Orthopaedic Surgeon

Hip, Knee, Wrist

Associate Professor Sina Babazadeh

MBBS PhD PGDSA GCALL FRACS FAORTHA

LANGUAGE: Farsi (conversational)

Associate Professor Sina Babazadeh is an orthopaedic surgeon with a special interest in wrist, hip and knee surgery.

I completed my medical education at Monash University, and subsequently over a 5-year period I finished my orthopaedic training in Victoria and Tasmania.

I have also completed multiple post-graduate degrees, concentrating on orthopaedic surgery and anatomy, culminating in a PhD in knee replacement surgery; technique and optimizing functional outcome. In my thesis and subsequent research, I've investigated factors affecting outcome after knee replacement surgery, and how best to optimize them.

I completed further specialist training in wrist surgery in Barcelona, Spain under the guidance of Professor Marc Garcia-Elias, arguably regarded as one of the best wrist surgeons world-wide. He taught me to appreciate the "most complex joint of the body" which allowed humans to climb down from the trees and make and use tools, an evolutionary marvel.

Outside of surgery, I have a keen interest in research, anatomy, philosophy, history and bad puns. I am also a member of the Royal Australian Air Force Reserves and would feel privileged to be able to help any defence force personnel or associates.
