Doctor Profile Orthopaedic Surgeon Hip & Knee

Dr Iswadi Damasena MBBS(Hons) FRACS FAOrthA

I am an Australian trained orthopaedic surgeon with sub-specialty interest in hip and knee replacement, soft tissue knee injuries, as well as trauma. I am also trained and qualified in both custom knee replacement and robotic surgery of the knee. My aim is to provide my patients with the best possible care whilst involving them in the decision-making process every step of the way. I treat both adults and children.

I completed my fellowship at the Royal Australian College of Surgeons in 2017, followed by a postgraduate fellowship training in knee surgery at the prestigious OrthoSport Victoria practice in Melbourne. I then went on to complete a complex knee fellowship in the United Kingdom focusing on cartilage and meniscal restorative surgery, anterior cruciate ligament reconstruction, and osteotomy.

I hold a public appointment at Box Hill hospital and engage in regular teaching activities of both medical students and junior doctors, as well as orthopaedic trainees. I have published multiple papers on both hip and knee surgery and continue to undertake research to further orthopaedic science and to improve my practice. I undertake regular speaking appointments both nationally and internationally.
