Doctor Profile Orthopaedic Surgeon Hip & Knee

Mr Rohan Sheehy

MBBS, FRACS, GDipSurgAnat, B Physio

Mr Rohan Sheehy is an Australian-trained orthopaedic surgeon sub-specialising in hip and knee surgery.

His areas of interest and expertise include hip replacement surgery, knee replacement surgery, knee arthroscopy and ACL reconstruction. He performs robotic knee replacement surgery, as well as complex revision hip and knee replacements. He also regularly manages upper and lower limb trauma in both adults and children, including surgery for fractures and soft tissue injuries.

Training & Qualifications

Rohan originally trained as a musculoskeletal physiotherapist, working in Melbourne and the United Kingdom for six years before pursuing medicine. This background continues to inform his surgical practice, giving him a particular appreciation for rehabilitation and functional outcomes alongside the technical aspects of surgery. He completed his graduate entry medical degree at the University of Melbourne before undertaking specialist training in orthopaedic surgery across several hospitals in Victoria. Following qualification as an Orthopaedic Surgeon, he pursued further fellowship training in advanced hip and knee replacement surgery — including robotic surgery and revision arthroplasty — both locally in Melbourne and internationally, including a visiting fellowship in Paris, France. He has also completed orthopaedic trauma fellowships at both Western Health and the Royal Melbourne Hospital.

Areas of interest:

- Hip replacement surgery
- Knee replacement surgery
- ACL reconstruction
- Arthroscopy
